It's all a matter of intelligent organisation

Driver ergonomics in the Verso have been intelligently thought through – everything you need to see or touch is exactly where you need it to be.

The cockpit has a refined, modern feel. The three-spoke sports steering wheel is

four-way adjustable; controls and switches are positioned for optimum ease of use. Premium quality textures and materials create a high technology atmosphere. Optitron displays make the instruments easy to read; aqua-green illumination enhances instrument visibility further. There's a high quality audio system with

CD player; and a state-of-the-art In Car Entertainment (ICE) system (standard on T Spirit and T180) with twin DVD screens in the rear of the front headrests.

Convenience features include a storage box on the centre console and a cup holder positioned in the console itself.

When you're driving at night, an electrochromatic anti-glare rear view mirror (available on T3, T Spirit and T180) ensures you are less dazzled by the headlights of vehicles behind you. The mirror is a perfect example of Verso's intelligent, refined and driver-friendly interior design.

TODAY TOMORROW 

What kind of car do you need today?

Verso takes flexibility to new levels. With its innovative Toyota Easy Flat-7 seat system, it can be quickly and easily arranged into over 30 configurations, including seven-seat mode and two-seat mode with a flat load area.

Whether you need maximum seating, maximum load space, or anything in between, the Verso is as adaptable as you need it to be, providing plenty of space and comfort, whichever combination you choose. With seating design this easy to use, the Verso takes versatility to new levels.

Easy loading

The Toyota Easy Flat-7 seat system enables rear seats to be individually folded flat. Operation is via levers which are designed and positioned for maximum ease of use.

Friday...

Weekdays can be demanding: taking the children to school, picking their friends up on the way, driving to a meeting with colleagues. Fortunately, Verso makes it easy to accommodate up to seven people.

Front and second row seats are fully-adjustable for cushion tilt and backwards/forwards slide. Additionally, the front seats are height adjustable.

With all the seats in the 'up' position, Verso can accommodate up to seven people.

Front seats can be rotated 13° rear or forward 15° into their neutral position. They can slide backwards and forwards in 110 mm increments within a range of 238 mm.

An easy-flat seat-back mechanism enables second row seats to move forwards for easy access to the third row seats.

**STRATFORD
EAST**

WORK WITH US

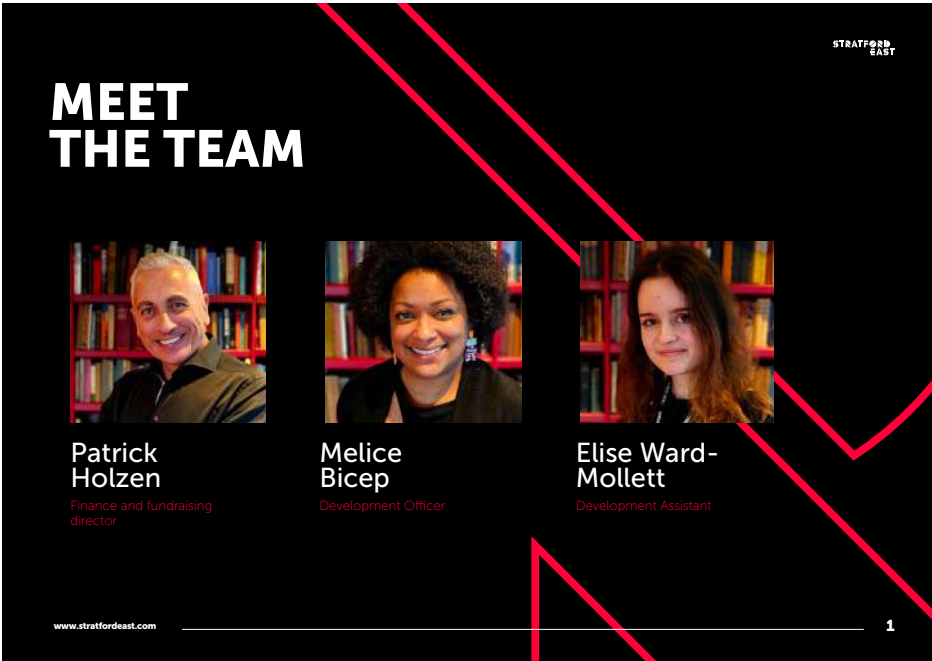

140 years after our foundation, Stratford East continues to thrive, putting on high-quality, boundary-pushing productions and serving our local community.

But times are hard for a creative venture like ourselves. Our ticket revenue and government funding only cover 57% of the income we need to operate. Each year, we need to raise £780,000, and we rely on the generous support of individuals, companies and grant-making organisations to continue and grow our work both on and off stage.

That's why we're looking to join forces with brand partners who share our values of creativity, inclusion and community engagement.

How Is Elliotts Drainage Different?

Dedicated drainage experts

Backed by years of proven experience in successfully managing and executing drainage projects of all sizes, we take pride in delivering reliable, cost-effective solutions that not only fix any drainage problem with confidence but also ensure durability, efficiency, and peace of mind for our clients.

Drainage problems can lead to costly disruptions for any business. That's why we manage every project efficiently, delivering top-tier service while minimizing impact on your operations. We also offer ongoing maintenance to

What is a Drain CCTV Survey?

clarity underground

Instead of having to complete disruptive digging and excavation works, a survey camera is used to inspect your drainage system which sends high-definition imagery to the above-ground monitor.

With these CCTV drain survey images, our Elliotts Drainage engineers can inspect the condition of the pipework to identify potential blockages and damage.

On completion of the survey we produce a CCTV drain survey report, which can include sharing imagery with you for your records. Our engineers will then advise on the recommended solution to the problems discovered, before providing a quote for works to be completed.

answers to your concerns

Clean Commitment

Safe disposal

We operate in an environmentally responsible manner on our customers' behalf, giving them the peace of mind that all waste is disposed of legally and ecologically, preventing pollution or any harm to the environment.

Our people also understand that a polite, friendly approach will ensure that our customers will keep coming back to us.

Before completing any works, we organise a site visit with our residential or commercial clients and provide clear, itemised prices for the works to be completed. This gives our customers comfort in making the right decision and the ability to compare our services against other contractors.
